## **NDWRCDP Disclaimer**

This work was supported by the National Decentralized Water Resources Capacity Development Project (NDWRCDP) with funding provided by the U.S. Environmental Protection Agency through a Cooperative Agreement (EPA No. CR827881-01-0) with Washington University in St. Louis. These materials have not been reviewed by the U.S. Environmental Protection Agency. These materials have been reviewed by representatives of the NDWRCDP. The contents of these materials do not necessarily reflect the views and policies of the NDWRCDP, Washington University, or the U.S. Environmental Protection Agency, nor does the mention of trade names or commercial products constitute their endorsement or recommendation for use.

## **CIDWT/University Disclaimer**

These materials are the collective effort of individuals from academic, regulatory, and private sectors of the onsite/decentralized wastewater industry. These materials have been peer-reviewed and represent the current state of knowledge/science in this field. They were developed through a series of writing and review meetings with the goal of formulating a consensus on the materials presented. These materials do not necessarily reflect the views and policies of North Carolina State University, and/or the Consortium of Institutes for Decentralized Wastewater Treatment (CIDWT). The mention of trade names or commercial products does not constitute an endorsement or recommendation for use from these individuals or entities, nor does it constitute criticism for similar ones not mentioned.

## **Soils 140**

### **Agenda**

<i>Time</i>	<i>Subject</i>	<i>Speaker</i>
845-900	Welcome Introductions Objectives	
900-930	Definitions What are the particle size fractions Fine earth vs coarse fragments Size of fractions Classification systems Why do we care about texture?	
930-1000	Texture Classes Texture Triangle Sand fraction modifiers Coarse fragment modifiers	
1000-1015	Break	
1015-1145	Laboratory Textural Analysis (part 1) Principles – Sieves, Stokes law, nomographs Methods (pipet and hydrometer)  Laboratory exercise	
1145-1230	Lunch	
1230-200	Texture by feel Verbal description of process Demonstration of process with knowns Practice with unknowns (start with one texture and work through those common to area or region)	
200-330	Field component from pits and/or auger	
330-345	Break	
345-445	Laboratory Textural Analysis (part 2) Silt/clay determination (hydrometer)	

Data synthesis

445-500

Texture, treatment, hydrology relations  
Wrap up

## **Soils 140**

### **Overview**

Soil texture is often used as one of the primary soil characteristics to assist in determining loading rates for on-site systems. The effects of soil texture on water flow and treatment potential in on-site systems will be covered. Students will utilize bulk field-moist soil samples and dry, prepared soil samples that have been analyzed in the laboratory to calibrate their fingers during hand-texturing of soils. After analyzing known samples students will utilize their texturing skills to determine the sand, silt, clay contents and particle size class of unknown samples. Finally, students in this one-day short course will be introduced to various particle-size scales used by soil scientists and engineers and discuss the two primary methods of determining particle size in the laboratory: the hydrometer method and the pipette method.

## **Soils 140**

### **Goals**

1. Participants will master an advanced working knowledge of soil texture used for accurate field descriptions of soil morphology.
2. Participants will begin learning how to apply their knowledge of soil texture to a typical land use question – land suitability for an on-site wastewater treatment system.

## **Soils 140**

### **Learning Objectives**

1. To gain a better understanding of how determine texture in the field.
2. To gain a better understanding of how determine texture in the laboratory.
3. To gain a better understanding of use texture to assign LTAR.
4. To gain a better understanding of different texture systems.

**Soils 140**  
**Prerequisites**

SOILS 110

## Soils 140 Evaluation Form

### Soil Texture

#### Evaluation Form

Name (optional): \_\_\_\_\_

With a rating scale of 1 (Disagree) to 5 (Agree), please respond to the following questions

#### *Review of printed materials:*

	Disagree					Agree				
The text completely covers the topic area.	1	2	3	4	5					
The visuals completely cover the topic area.	1	2	3	4	5					
The discussion notes completely cover the topic area.	1	2	3	4	5					

#### *Review of learning objectives:*

I gained a better understanding of how determine texture in the field.	1	2	3	4	5					
I gained a better understanding of how determine texture in the laboratory.	1	2	3	4	5					
I gained a better understanding of use texture to assign LTAR.	1	2	3	4	5					
I gained a better understanding of different texture systems.	1	2	3	4	5					

What specific recommendations would you provide for the text. \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

What specific recommendations would you provide for the visuals.  
\_\_\_\_\_  
\_\_\_\_\_

What specific recommendations would you provide for the notes. \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Please give specific positive comments on the topic/module. \_\_\_\_\_
